LEONARDO VIEIRA FERREIRA

Product Engineer | B2B SaaS, User Workflows & Applied AI

Rio de Janeiro, Brazil | leovieiraf.599@gmail.com | leoferreira.dev.br | linkedin.com/in/leonardo-v-ferreira

PROFESSIONAL SUMMARY

Product Engineer with 5+ years across backend and data engineering, product management, and technical leadership. I adapt quickly to unfamiliar domains, translate user and business needs into product decisions, and own solutions from discovery through launch and iteration. In my experience, this has meant leading product expansion into new B2B segments, redesigning core workflows, and securing measurable outcomes, including improvements in churn indicators tied to usability and customer experience.

PROFESSIONAL EXPERIENCE

Reach.ai - SaaS MarTech | Senior Software Engineer

Nov 2025 - Present | Remote - Scottsdale, AZ, United States

- Building an LLM-powered appointment agent for voice and SMS to handle booking, rescheduling and cancellation for service businesses, using LangGraph, OpenAI tool calling, RAG over business knowledge and scheduling APIs.
- Designed behavioral evals, guardrails against unsupported responses, Redis-backed idempotency and observability with LangSmith and internal audit logs, ensuring optimized median voice response latency to ~2 seconds.
- Engineered Python/FastAPI APIs and event-driven messaging flows processing 20M+ SMS and emails monthly with 99.9% delivery reliability, improving queue processing and idempotency to support 50x peak throughput capacity.

Guiavet - Veterinary HealthTech SaaS | Head of Engineering & Product Lead

Dec 2021 - Nov 2025 | Remote - Belo Horizonte, Brazil

- Progressed from Software Engineer to Product Manager to Head of Engineering & Product Lead, leading five engineers and owning discovery, prioritization, technical decisions and delivery as the veterinary SaaS product matured.
- Built the core Django backend product across scheduling, medical records, prescriptions and pharmacy workflows, taking features from scoping through launch and iteration to support hundreds of monthly recurring users.
- Turned user research and usage data into redesigned clinic workflows, cutting time for some critical operations by up to 80% and reducing usability-related churn indicators by up to 95% within one month after the redesign launch.
- Led product expansion beyond solo practitioners to veterinarians serving other clinics and to clinics themselves, tailoring product packaging and workflows to meet the needs of both B2B segments.

EARLIER EXPERIENCE

QDOIS - Data Intelligence Consultancy | Data Engineer

Oct 2020 - Nov 2021 | Remote - Belo Horizonte, Brazil

- Designed and implemented Azure/Databricks/PySpark data integrations across databases, APIs and SFTP sources, creating a reliable foundation for reporting and ML.

SELECTED PROJECT

Football, Visualized (Sports Data Visualizer) | Independent Project

Live Project | GitHub | Next.js, React, TypeScript, Python

- Built and deployed a multilingual football analytics app with interactive expected goals (xG) predictions, a reproducible StatsBomb data pipeline using scikit-learn and XGBoost, verified Python/browser inference parity, and published methodology and evaluation results.

TECHNICAL SKILLS

Product & delivery: User discovery, workflow design, prioritization, technical scoping, UX collaboration, roadmap trade-offs

Engineering: Python, Django, FastAPI, JavaScript, Vue.js, PostgreSQL, Redis, MongoDB, REST APIs

Applied AI: LangGraph, ReAct orchestration, OpenAI API/tool calling, RAG, behavioral evals, guardrails, LangSmith

Cloud & data: AWS Lambda, ECS, SQS, API Gateway, Azure, Databricks, PySpark

EDUCATION

Bachelor's Degree in Control and Automation Engineering | UFMG, 2017-2022

PUBLICATIONS & LANGUAGES

Publication: Co-author, "Algorithmic Recourse in Mental Healthcare," IJCNN (IEEE), 2023.

Languages: Portuguese (native); English (fluent); Spanish (advanced).
